FORCE MULTIPLIER

INTRODUCTION

The Safe Cop App will change Police work forever, plain and simple. The Safe Cop App will allow Officers to do their job faster, better and safer. It will allow your Officer to serve the Public faster and better. It will be a key tool in the Policemans pocket. It impacts every department from Dispatch to the Court guys!

The Safe Cop App is a significant force multiplier. It gathers, transfers and shares data like nothing ever created. Buying the Safe Cop App will mean that your Officers spend less time doing paperwork so they can spend more time patrolling doing what they are EXPERT at and this is what your community wants and needs. Safe Cop provides amazing value.
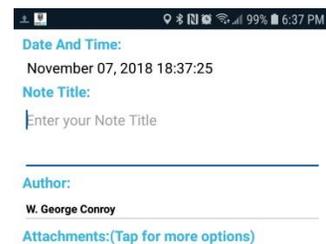

The Safe Cop App manages data from the 911 call to the crime scene to the courtroom like you never thought possible. Data sharing is a breeze. Emergency Response is safer when data is live broadcasted and live streamed. And the Safe Cop App can NOT be monitored by a Police Scanner.

Please let us set you up with a Demo so you can see it for yourself.

SYSTEM OVERVIEW

The Safe Cop App needs **no special equipment;** every department already has the equipment needed.   Safe Cop has up to 5 components dedicated to the safety and workday success of your Officers and Civilians. It is focused on reducing crime in your area.

1. The **Dispatch System (DS)** sits in a cloud, safe, secure and flexible. It guides, supports, sends and receives data to and from the Safe Cop App. The Dispatch System will be located in your Call Center (but can also be accessed from any PC), it sees and monitors all of your Officers. The DS is web based and portable.

2. The **Safe Cop App (SCA**); is loaded onto their existing smart phones and or tablets. It is directly connected to the DS.

3. In **Vehicle Monitor System (VMS)** This component is accessed by laptops via the internet and only an internet browser is required. It has the same view as the Dispatch Console and many of the capabilities.

4. **Live Map** Our System facilitates a Live Map published to the internet. The Live Map can be used to educate and to communicate events to the General Public when large events occur. IT takes minutes to achieve this.
5. **OPTIONAL Resident App:** The Resident App is an app that is not tracked but that allows Residents to push a Help button INSTEAD of
6. **OPTIONAL We Watch App:)** The We Watch App is very similar to the Safe Cop App but is designed for Civilians to support Police and to deter crime. The We Watch App can report direct to Dispatch. Civilians and Police working together.
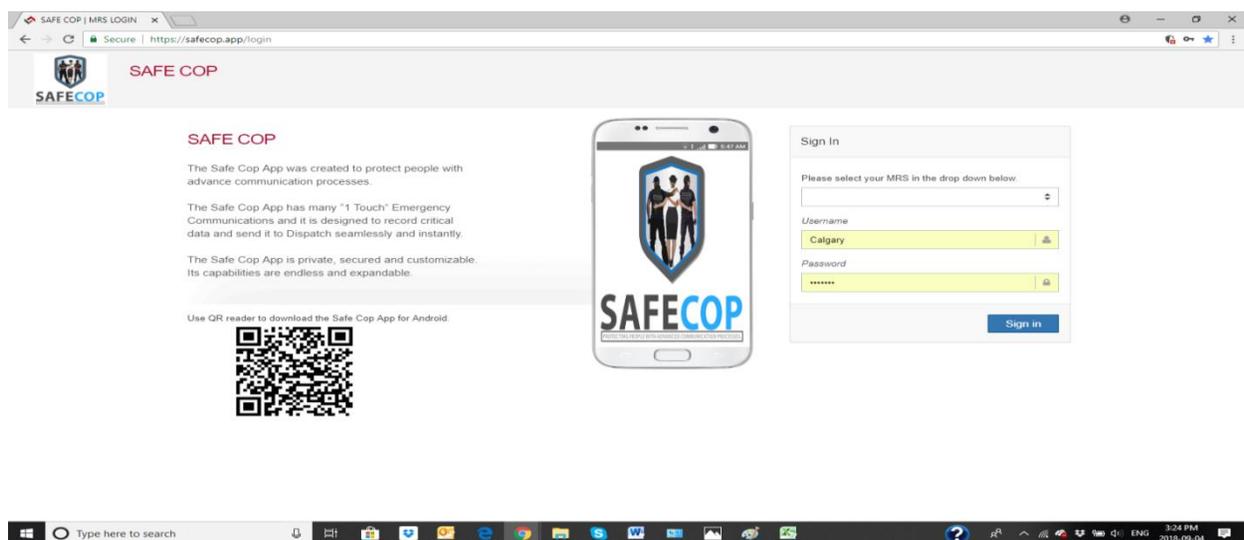

DISPATCH SYSTEM (DS) FEATURES

The Dispatch System is a powerful, cloud based, web accessed, user interface centered on a live, Tactical Map. The DS facilitates; 911 Call placement and response, Officer Tracking, Monitoring, Live Broadcasts & Live Streaming, Data Collection and can communicate outwardly to the Apps.

In seconds a 911 call can be added to the tactical map and it is responsive. Officers can interact with the App and it auto updates for all to see.

The DS is map based and gives visual and audible clues when a response is required. Its prime focus is to empower Officers and to receive, share and store critical data.

A DS can be created anywhere there is a PC and the internet. A Username and Password must be generated by the System Administrator and all DS Technician activities are recorded.

The DS tracks and can see <u>all</u> SCA's (unless they wish to be hidden) and it always knows who is using the Work Alone Module.
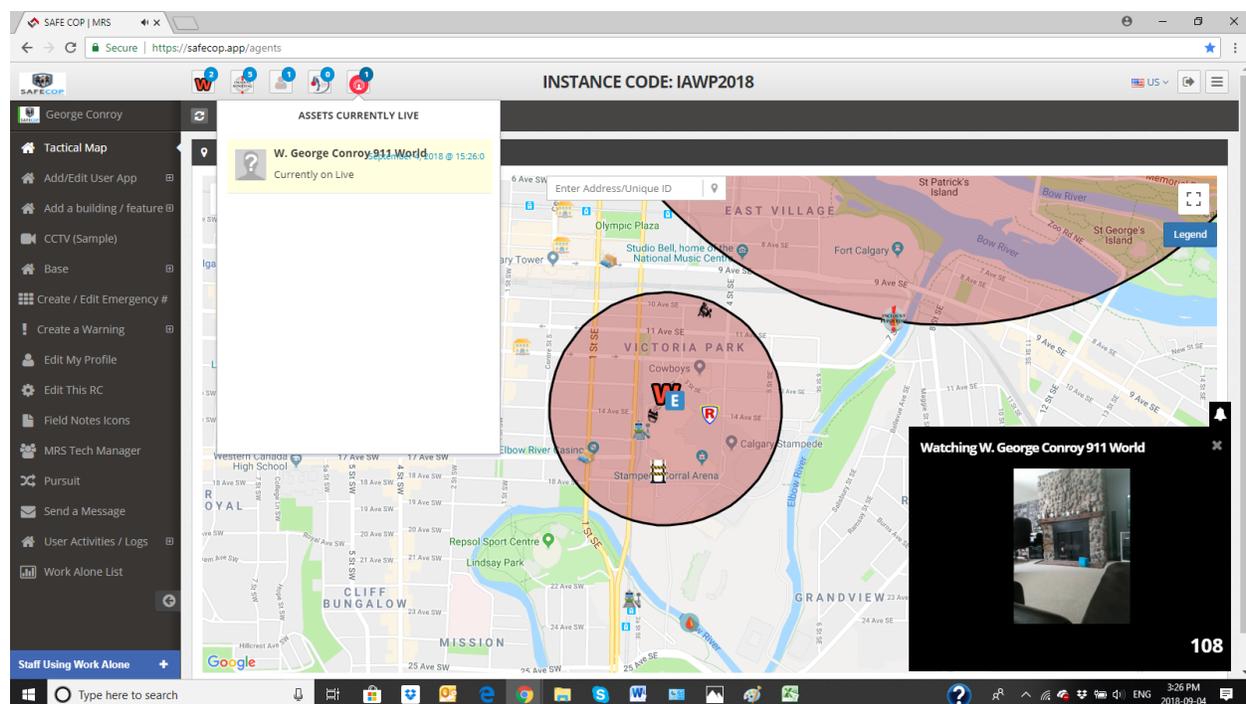

The Tactical Map is centered on a Response Center. A single system can have multiple Response Centers and multiple bases to aid in Officer Management. Response Center creates its own Users/Apps. The App is connected to and responds only to the Response Center that created it. Each RC has its own Dispatch staff. This provides exceptional accountability.

The Tactical Map can be filled with features and is constantly tracking and being updated both internally and externally.

The DS can also send out precise messages/warnings as needed to the Officers and then can manage their feedback.

All activities of the DS Technicians are recorded and cannot be deleted without the log tracking it.

The DS can also be a Tactical Command Post with the ability to set roadblocks, sniper positions, heliports, muster points, staging areas etc. The feature list can be expanded as needed inside of the DS.

Access to the DS is restricted but can be shared when needed. Senior managers and subject matter experts can easily access the DS outside of the Dispatch Center if and when needed.

Many DS Technicians can be logged onto the system at the same time seeing the same data. The entire Safe Cop App System is safe, strong and scalable.

SAFE COP APP

The Safe Cop App component has a plethora of features designed to make an Officers job easier and more efficient.

The system has a feature called the "Notebook". This single feature will save millions of dollars annually for a police department as this feature can save dozens of hours a week per officer. This means more Officers on the street doing their job.

The Safe Cop App also has four "1 touch" emergency communications and it is designed to quickly record critical data and send it as needed seamlessly and instantly. These will save lives.

The Safe Cop App is private, secured and completely customizable. Its capabilities are endless and <u>expandable</u>.

The Safe Cop App goes everywhere the Officers go. It is ideal for:

- Foot Patrol/Bicycle Patrol/Motorcycle Patrol/Horse Patrol/ Boat Patrol and Helicopters.
- But the App is also with the Officers when they <u>leave</u> their patrol cars.
    - IT is so effective for making notes and gathering data.

The DS is a powerful, web based, user interface centered on a live Tactical Map. The DS facilitates; Tracking, Monitoring, Live Broadcasts & Live Streaming, Data Collection and can communicate outwardly to the Apps.

Via the DS the Dispatch Center monitors all Officers and receives the data Officers <u>choose</u> to send or share there. The DS is both reactive and proactive.

Training on the App takes minutes, training for the DS takes about 2 hours!

SAFE COP APP (SCA) FEATURES

The SCA is an amazing; notebook, live camera, communications, tactical, tracking, reporting, safety, and evidence collecting tool. There is nothing like it on the market.

The App can dramatically reduce Radio chatter as the Tactical Map receives pictures and precise data instantly. A picture is worth a thousand words they say.

Here is an overview of the Apps features:

- A **Tactical App Map**. The map is live and is constantly being updated by other Officers and the DS. The map features all of the data that an Officer needs to be effective and informed. Such information as:
    - Current emergencies (field notes),
    - the location of other Officers,
    - all DS added Features,
    - Officer added Features,
    - Suspicious buildings,
    - Sniper locations and more.

The map is being constantly updated and all features can be "opened" for more information.

- **Notebook** using this feature allows you to create audio notes, video notes, written reports and pictures then you can choose WHERE this data is sent to. The data can go right from the Officer to the Courtroom.

    Speak directly to your Notebook and your notes are now **digital** and there is no need to retype for a report (who loves typing?). Just email the note to yourself and cut and paste into your reports. Less time typing is more time "coping"!
    No more "old fashioned pen and paper notebooks" needed. Audio and Video notes capture all the critical details. The data process is streamlined and will reduce Administration time.
- An Officer can initiate a **Live Broadcast** when needed to share their vision. The Officer can send a Live Video & Audio Stream directly to the DS and or to other Officers with the App. This allows them to share EXACTLY their perspective when needed to the DS and the DS can record it then share with other Officers.
- **Officer Down** 1 touch of this button and the DS and all Officers are instantly notified and the location where the Officer is down is shared.

- **HELP** 1 touch of this button and the DS and all Officers are instantly notified and the location of the Officer is shared and is constantly updated as the Officer moves about.
- **Pursuit Tracker**, 1 touch and your Officers and the DS are notified and the pursuit is seen on the Tactical Map and it is tracked and recorded.
- **Drops** 1 touch and Drops can be added during pursuits to the map for other Officers to source while the pursuit continues.
- **Field Notes** can be instantly added to the Tactical Map.   This allows the App to also be an amazing on scene; Tactical Planner. Features such as:
  - Suspicious Building/Suspicious Activity/Active Fire/Car Accident/Muster Point/Helipad/Sniper location etc. The # of features is unlimited and controlled by your DS.
- **Shift Tracker**, press Start Tracker at the beginning and then at the end of your shift press Stop Tracker. The App will create a Report and Map that illustrates your shift. This can be sent to your Supervisor for review. This feature also records how far and how many hours you worked and travelled, also great for payroll.
- **DS Live Streaming**, the DS can live stream the App when needed and record the video/audio to HELP the Officer when needed.
- The App can receive **Messages** sent by the DS.
- An Officer can be **Visible** or **Hidden** on the Tactical Map as needed.
- A powerful **Work Alone Module** can be used for Officers working in even higher risk circumstances.

The App and DS can be customized for each separate Client as needed; features can be added or hidden.   Tell us what you need?

User Profile

The SCA has an effective User Profile that allows different types of Officers to be represented by different icons. New Officer types can be added as needed.

The profile includes Badge #, Supervisor and Blood Type and it can be expanded. Each Officer will also create their own customized "Response Procedure" document attached to the App complete with a "Duress Code". This is to be used in the event the Officer is injured or captured.

VEHICLE MONITOR SYSTEM

We have created a revised version of the DS that can be viewed and used on a laptop in a Police Vehicle. All that is needed is a laptop and the internet.

The VMS share the large live tactical map on the laptop screen.

Features can be added to the Map.

All reports will be received by this system.

All needed websites links can be integrated.

Officers still have the App.

Future upgrades coming such as low cost dash cams and more.

THE LIVE MAP

A live map is easily created from the Dispatch System. The Live Map can be published in several locations on the world wide web.

Out team customizes your live map so that is show ONLY what you need to show to the Public to help to keep them informed and safe!

Once the map parameters are defined the Dispatchers are able to post critical data and warnings to the map in a minute allowing instant communications and data transfers.

OPTIONAL; RESIDENT APP

To your local Safe Cop system we can ADD an App for your Residents. It can be completely optional but adds amazing capabilities.

This App is NOT tracked until a Resident needs HELP or Reports a Concern.

This App is perfect for those that need more Help, this App can help to protect the disabled.

When HELP is pushed your Dispatch knows WHO WHERE WHEN. The User profile CAN list all Medical issues, blood type, identifying marks and Emergency contacts.

It can support the police by reporting things of interest and the App can be Livestreamed when the Resident is in trouble.

This App can also receive messages and warnings from the Dispatch and in a large scale emergency critical data can be precisely delivered to those that need it!

The Resident app is featured in our T911 System seen here: http://www.t911.online/

OPTIONAL; WE WATCH APP http://www.wewatchapp.com/
The We Watch App is the first cousin to Safe Cop. The Apps are very similar. We Watch is the civilian version and we highly recommend that is be directly connected to your Dispatch Center.

Civilians can now easily provide the Police with critical information.

All the power of the Resident App and MORE!!

ADDITIONAL FEATURES

911 World Ltd. has been creating Software Systems and Apps for four years and there are many more features that could be added to the Safe Cop App. Capabilities such as:

1. E-ticketing.
2. Plates and other searches can be run from the App.
3. Any web-based system can be integrated into the App.
4. Timesheets can be created. OT notifications can be built in.

And so much more! You imagination is our only limit and we are glad to learn from you and to make your vision real.

We are also able to integrate with your existing systems. We are focused on what we do well.

DEMO

The best way to see the power and to understand the system is to use it. As they say, "talk is cheap" and "actions speak louder than words".

We will set you up with a 100% operational Demo for 60 days for you to assess our Safe Cop App. Training is easy to do and can be done remotely. Please contact us to set up a demo.

FUTURE UPGRADES

The future for Safe Cop is incredible. It will improve and grow for years. The Safe Cop App will help your departments and it will change Policing and once the system is purchased all future upgrades are free so there is no need to wait.

SYSTEM COSTS

There are 4 cost components to be considered:

1. Initial licence purchase. This is a progressive licence starting with a minimum of 25 Apps. This is a one-time fee with lifetime upgrades once the Apps are purchased.
   - There are minimum charges based on the security features needed.
2. A monthly cost for each SCA is charged. The fee is set at the time of signing and will remain set for the length of the initial Contract.
3. Training will be extra.
4. System customization will be extra.

CONTACT US

For more information please contact and we will be glad to create a demo for you.
